</table>

Cleaning Instructions

Inspect the instrument for signs of deterioration or damage (cracking, blistering, separation of coating, pitting). Do not use if deterioration or damage is observed. Thoroughly wash the instrument in a mild, warm detergent. Bard recommends hand dishwashing detergent. Then rinse all parts well with hot water. Thoroughly dry the product inside and out.

Lubrication Instructions

Use quality medical grade lubrication compatible with the sterilization method desired. Bard recommends the use of Bard Magnum lubrication pack, product number LP-1522.

Sterilization Instructions

Sterilize either by autoclave or ethylene oxide. Prior to sterilization the instrument should be disassembled and all medical grade lubrication removed from the gun. Sterilization conditions for autoclaving are 250°F (121°C) for 30 minutes and for ethylene oxide sterilization, 500mg/L ethylene oxide, 50%-70% relative humidity (RH) and 120°F-130°F, with exposure time dependent on type of vessel. To ensure effectiveness, sterilization process should be properly validated and monitored with the proper biological controls. Sterilization operations should proceed according to sterilizer manufacturer’s instructions.

To order, call 1-888-367-2273 or fax order to 1-888-383-3839.

Bard® MAGNUM® Disposable Biopsy Needles

To remove sample, repeat step 2.
